ULTIMATE HI-FLOW

Core Caddy

With 3 Cores

The Core Caddy is a practical two-in-one service tool designed to simplify valve core removal, installation and storage. The integrated steel keyway allows engineers to quickly and securely remove and refit valve cores, even when working in difficult-to-access locations.

Designed to minimise the risk of dropped, lost or damaged valve cores, the secure retention system holds the core firmly during servicing. For added convenience, the handle incorporates internal storage for spare valve cores, with three spare cores supplied as standard, ensuring replacements are always close at hand when required.

Description	Part No.
Core Caddy	JAV-1619

Key Features & Benefits

- Two-in-one valve core service tool.
- Steel keyway for easy core removal and installation.
- Secure core retention during servicing.
- Prevents loss or damage of valve cores.
- Integrated storage compartment within handle.
- Supplied with three spare valve cores.
- Compact and convenient design.
- Ideal for servicing in confined spaces.
- Improves service efficiency.
- Reduces downtime during repairs.
